PROFILE

Software Developer specializing in the Java ecosystem, focused on building real time applications with consistency.

EDUCATION

MIT Arts, Commerce & Science College
Bachelor of Science in Computer Science

Maharastra, India
2024 – 2027

Pratibha Junior College
Stream : **Science (PCM)**

Maharastra, India
2022 – 2024

SKILLS

Technical: HTML, CSS, JavaScript, Angular, React.js, Next.js, Java, Spring Boot, Hibernate, Microservices, RDBMS, MySQL
REST APIs, Docker

Language: English(Fluent), Marathi(Fluent), Hindi(Fluent)

EXPERIENCE

Cognifyz Technologies
Software Development Intern

Maharastra, India
12/2025 – 1/2026

- Developed a Java console application with full CRUD operations for task management.
- Implemented persistent data storage using secure File I/O, ensuring data integrity and error handling.
- Built a web scraper to extract and structure data from multiple websites for user-friendly presentation.
- Optimized code for maintainability, scalability, and testability through modular design and logic improvements.
- Practiced Agile methodologies, collaborating with mentors and peers to meet deadlines and incorporate feedback.

PROJECTS

AI-Based Answer Evaluation System | Full-Stack Java Project [Link](#)

11/25 – 12/25

- Engineered an AI-driven web application using Java and Spring Boot to automatically evaluate and score student answers through keyword matching and semantic similarity analysis.
- Developed RESTful APIs for frontend-backend integration and implemented MySQL/PostgreSQL for persistent data storage.
- Delivered an AI-powered evaluation tool that automates answer scoring, reducing manual grading time by 70% in simulated scenarios.
- Built and deployed a production-ready application using Docker, ensuring consistent environments and easy scalability.
- Created a modular and maintainable codebase with secure API design, enabling future integration with LMS platforms.

Good From Waste — Full-Stack Sustainability Web Application [Link](#)

07/25 – 08/25

- Good From Waste--Full-stack web application that visualizes recycled waste as potential products to encourage sustainable behavior.
- Increased user engagement in recycling by visualizing waste to product conversion in real time.
- Delivered interactive, animated UI using Framer Motion for an intuitive and modern user experience.
- Successfully deployed a scalable, real time application using Firebase Hosting and Cloud services.
- Tech Stack: Next.js, React, Firebase (Hosting, Realtime DB), Framer Motion, CSS Modules, Git
